TASK 3.1P

Design

Intro

This week we talk about design! Because at the end of the day, we need to make things happen on the screen.

Task

Upon completing the lecture, it is important to consider certain aspects in the design of the "Locate a Socket" application, for which you have already written the SRS document in 2.1P.

Please provide the use cases, user stories, and user requirements for the "Locate a Socket" app along with any relevant design specifications in order to depict the connections between them. Simple diagrams can be used to illustrate the design specifications.

Submissions details and Delivery

After completing the design aspect of the previous scenario in 2.1P, please proceed to upload the converted PDF file on OnTrack for this specific task. Make sure to include references at the end. Page limitation: 3 pages with references.
